Profile

I am a self-taught developer. I have been studying and developing applications and systems since 2019, continuously researching and learning to expand my knowledge and stay up to date.

My approach starts with understanding the context and structuring the solution before development. For Reports Registry and Web Matrículas, I analyzed the systems and created UML diagrams before coding.

Available for freelance projects; remote work on a part-time basis only.

Technical skills

Java and Spring Boot; React, JavaScript and TypeScript; native Android development with Kotlin; PostgreSQL and SQL, including tables, relationships and queries; systems analysis and UML modeling. Course-based backend experience with Node.js, without an independently developed project using that technology.

Selected projects

Reports Registry — Commercial project · Private source code

I independently developed a system for an electrical engineering company to record equipment inspection reports and let clients check validity and inspection dates. Technologies: Java, Spring Boot, React, JavaScript, Apache POI and Heroku.

I used Apache POI to read Excel spreadsheets and import inspection report records. I also fixed user update errors and handled search edge cases, including empty searches. These experiences strengthened my understanding of data imports and error handling. Source code, code excerpts, company identity, client data and documents are not disclosed.

Audience-Counter — Own application · Published on Google Play

An Android audience-counting app with direct and row-based counting modes. I developed the app individually in Kotlin, with partial assistance from Gemini. It was a learning experience in native Android development.

Web Matrículas — Independent project · Not deployed

A school enrollment management system for students, classes and groups, developed individually without AI assistance. I analyzed the system and created UML diagrams before coding. Technologies: Java, Spring Boot, React, JavaScript, TypeScript and PostgreSQL. The system was implemented but was not put into operation at the school.

DS Commerce — Educational project · DevSuperior

An e-commerce project developed by following Formação Desenvolvedor Moderno in full, without my own adaptations. Working through the project provided experience in building a system from start to finish. Technologies: Java, Spring Boot, React, JavaScript, TypeScript and PostgreSQL. Payment integration was not implemented.

Completed courses

Formação Desenvolvedor Moderno — DevSuperior · 2023

Bootcamp React — DevSuperior · 2022

Bootcamp Spring — DevSuperior · 2021

Desenvolvimento com React Native — Udemy · 2023
